

## **Lime Harvesting Robot Challenge**

This competition aims to encourage students to apply creativity and engineering skills in designing a functional robot. The task focuses on developing an automated system that can identify and pick ripe limes while leaving unripe ones on the tree. To ensure fairness, clear competition rules and technical specifications have been established for all teams. Evaluation will be conducted based on a structured marking rubric that combines robot functionality and task performance.

**Figure 1:** A plastic lime plant in a pot with artificial ripe (yellow) fruits, used as the target model for the robot-picking task.

**Figure 2:** Conceptual illustration of the lime-picking robot. The robot base is positioned minimum 50 cm from the pot, with an arm and gripper mechanism reaching towards a ripe lime. *This is only a conceptual representation; the final design will depend on the creativity of each team.*

## **Competition Rules**

### **1. Robot Design**

- Each team must design a robot capable of picking ripe limes (*see Figure 2*).
- Ripe limes (yellow in color) must be picked and placed at the designated area.
- Unripe limes (green in color) must remain on the tree.

### **2. Plant and Robot Setup**

- The base of the plant pot is positioned minimum 50 cm above the floor (*see Figure 1*).
- The distance between the robot base and the pot is 50 cm.
- The robot's working space must be at least 30 cm (width) × 30 cm (height) × 30 cm (length).

### **3. Team Task**

- Each team must pick **3 ripe limes**.
- If unable to pick 3, then 2 or 1 ripe lime is acceptable.

### **4. Winner Determination**

- Evaluation will be based on two criteria:
  - a) **Functionality of the Robot** – how well the robot performs the task (accuracy in picking ripe limes, ability to avoid unripe limes, and overall reliability of movement).
  - b) **Task Performance** – number of ripe limes successfully picked. If the number is the same, the team that completes the task in the shortest time will be declared the winner.

### **5. Overall Winner**

- The overall winner will be determined by combining both criteria: **robot functionality** and **task performance**.

## Competition Rubrics

| Criteria                                      | Excellent (8-10 points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Good (6-7 points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Fair (4-5 points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Poor (0-3 point)                                                                                                                                                                                                                                                                                                                                                                                                                                        |

### Terms and conditions

1. Each team will be given **5 minutes** to complete the task, with a **maximum of two trials** allowed. The **total number of harvested lemons** from both trials will be **accumulated** for scoring.
2. The setup will consist of **three ripe** and **three unripe** lemons, which will be **placed randomly** during the competition.
3. The **stem** of each lemon will be made using **rolled brown paper** measuring approximately **1.5 cm × 3 cm**. Participants may select the **type of paper** based on **suitability** for their gripping or detection mechanism. Refer to Figures 3 and 4.
4. **Marks will be deducted by 50%** if a lemon is harvested **without proper cutting** of the stem.
5. The **judge's decision is final**.

**Figure 3:** The left-hand side shows the correctly rolled paper stem (the color should be brown). The right-hand side is incorrect, as the paper has not been rolled properly.

**Figure 4:** Multiple viewing angles of the lemons attached to the tree.
